SUBJECT: Meeting of 3/26/82 with Budd Co.

DATE: *3/30/82*

FROM: Robin Aitken, Environmental Engineer *Robin Aitken*
Superfund/RCRA Compliance Section (3AW12)

TO: Walter F. Lee, Chief *WFL*
Superfund/RCRA Compliance Section (3AW12)

On this date, I met with Mr. Herman Wolf of Budd Co. (215-673-1020) and toured both the dump area and the fill area. Mr. Wolf was extremely co-operative and willing to work with EPA in an effort to clean up these sites.

We discussed the past history of the site, including the landfilling of waste to CECOS in New York State. Herman thought that about \$600,000 had been spent to date and would get back to me with a more precise number.

It was decided to install a preliminary grid of nine sampling points. These would be at a two foot depth, from the area of concern. These samples would be gathered by Budd personnel. It is uncertain at this time as to whether Budd will run the samples or ship them to a private lab. If Budd does their own sampling, at least two samples will be split with a private lab for quality control.

Herman will also establish a surveying mark on the street or sidewalk for permanent reference.

For my part, I have agreed to check with our Annapolis people as to proper PCB sampling protocol and to attempt a resampling or splitting for the volatile portion of the dump.

Herman says that the sampling should be completed within two or three weeks. The results of the initial sampling will enable us to further plot our course of action. If the grid proves to be positive in terms of PCB's, then an expanded grid will be utilized to isolate the "hot spots".

SUBJECT: Sam Rotenberg, Toxicologist

FROM: Robin Aitken, Environmental Engineer
Superfund/RCRA Compliance Section (3AW23)

DATE: July 29, 1982

TO: Walter F. Lee, Chief
Superfund/RCRA Compliance Section (3AW23)

Attached are copies of the Budd Co. sample results. The four soil samples analyzed for volatile organic compounds showed no organics present.

The soil samples taken by Budd & EPA are summarized below. Only four EPA PCB samples were taken.

<u>Budd Sample #</u>	<u>Budd Results*</u>	<u>EPA Results*</u>
1	ND	
2	5	
3	ND	.85
4	1	
5	6	2.7
6	> 1	> .5
7	1	
8	9	
9	> 1	> .05
10	2	
11	1	
12	> 1	

*detection limit = 1ppm

We are preparing to do a close out memo on this site. If you have any objections, please give me a call at (215) 597-9328.

SUBJECT: Budd Site Investigation of April 22, 1982

DATE: 4/28/82

FROM: Robin Aitken, Environmental Engineer
Superfund/RCRA Compliance Section (3AW23) *Robin Aitken*

TO: File

Thru: Walter F. Lee, Chief
Superfund/RCRA Compliance Section (3AW23)

On the above date I met with Ed Davis, Mike Olszewshi, and Herman Wolf of the Budd Co. at the Sanverson Road Site.

Ed and Mike took 12 Soil Samples on a grid system (See Attached sketch) and will run them for PCB's. They gave me 4 samples (#'S 3,5,6,9) as a split. These were Federal Expressed to Annapolis to be run for PCB's and volatiles. By utilizing 50 foot centers, we were able to cover an area of 15,000 ft.
